

1000 X European Architecture

Braun Publishing | ISBN: 393878010X |
2007 | 1024 pages

“This is the most comprehensive, authoritative and up-to-date compendium of contemporary European architecture available in one single volume. Projects from all parts of the continent have been selected to create a representative overview of the latest European architecture.”

Line House
Line House utilizes a unique building system which is a refinement of a "standard" 200' (Standard Industrial Panels). It is 100 percent deep green, airtight, energy and well insulated, making this house the first to be certified according to the Swedish government's strict regulations on passive housing. Combined with highly efficient windows and foundations, the house does not require any active heating, even when the temperature drops to -30 degrees Celsius. The house is divided into a children's and an adult zone, which are connected through a common office zone passage. The roof is raised above the central areas adding and defining a feeling of space. The master bedrooms is linked with the living area by the floor to roof door. The raised roof then continues on the outside of the house, creating an overhang over the terrace.
